

WHAT IS MODULAR CONSTRUCTION?
Modular construction is a building process that uses prefabricated components to create a building. It is a fast and efficient way to build, and it can be used for a wide range of projects, from residential to commercial. The process involves creating a design for the building, then manufacturing the components in a factory. The components are then transported to the construction site and assembled on-site. This process can significantly reduce the time and cost of construction.

NRB Modular Solutions Inc.
